

**Summary of Substantive Changes
Between the 2010^{e1} and 2018 Editions of
ASTM C1173, Flexible Transition Couplings for Underground Piping Systems**

Presented to the IAPMO Standards Review Committee on March 11, 2019

General: The change to this standard should not have an impact on currently listed products. The substantive change is:

- Added clarification for 300 series stainless steel requirements (see Section 7.1).

Section 7, Clamp Assembly Requirements: Added clarification for 300 series stainless steel as follows:

7.1 All metallic components shall be of 300 series stainless steel conforming to the [chemical composition](#) requirements of Specification A240/A240M. All metallic components made from round stock shall be of 300 series stainless steel conforming to the requirements of Specification A493 (excluding copper-bearing alloys).
