

**Summary of Substantive Changes  
Between the 2010 and 2010a Editions of  
NSF 14 “Plastics piping system components and related materials”**

**General:** The technical content was not changed significantly and there should be no impact on current listings. However, there were changes to the standard that affect manufacturer quality assurance requirements.

Table 3: updated to include a gas chromatography/flame ionization analytical method for methyl ethyl ketone.

Tables 10, 18 and 27: A footnote *Degree of crosslinking samples shall be taken from normal production after the point in the process where the crosslinking reaction is nominally complete.* was added to the tables.

Tables 6, 9, and 13: The start frequency of in-plant QC for socketed fittings was changed from every ~~24h~~ to weekly.
