Clean water and sanitation are fundamental human rights.

They directly impact life, health, prosperity, and opportunity.

The International Water, Sanitation and Hygiene Foundation (IWSH) works with international stakeholders to...

DEVELOP FRAMEWORKS FOR WATER AND SANITATION SYSTEMS

BUILD A SKILLED WORKFORCE

ESTABLISH MECHANISMS FOR RELIABLE SUPPLY CHAINS

We devote our resources and technical expertise to work with public and private partners in carrying out these three-fold objectives.

This goes beyond providing clean water and sanitation to build the technical framework, workforce and supply chains to sustainably grow these services in every country.

IWSH serves as the conduit for the International Water, Sanitation and Hygiene community, with specific focus on the role of the Plumbing Industry in community collaborations and educational exchange.

IWSH is a registered 501(c)3 charity

Clean, accessible water for all is an essential part of the world we want to live in.

UN Sustainable Development Goals, 2016
DRIVING DEVELOPMENT, ACTION AND CHANGE...

The International Water, Sanitation and Hygiene Foundation (IWSH) aims to enhance lives around the world by extending the work of industry, government, charities and organizations through collaboration. We help our partners take the next step in developing standardized systems that can be replicated globally, accompanied by training that builds communities.

We promote and connect partner agencies working in the international WASH sector. We offer technical assistance to innovative and inspirational programs addressing improvements in public health and living environments, for communities most in need.

Let’s work together! Get in touch to share your ideas for collaboration with us at info@iwsh.org.

...IS OUR GOAL

Across the world, we connect technical experts with local community networks to develop and embed real skills in the design, management, and long-term sustainable maintenance of water and waste systems.

2.4 billion people lack access to basic sanitation services, such as toilets or latrines. Water scarcity affects more than 40 percent of the global population and is projected to rise. UN Sustainable Development Goals, 2016

IWSH.org

TECHNICAL EXPERTISE + INNOVATIVE STRATEGIES + EDUCATION FOCUS

We promote international codes, standards and regulations across the plumbing industry.

We direct personal and corporate donations from industry partners to support in-country programs.

We encourage innovation in skills development and training delivery, with key emphasis on youth.

Visit IWSH.org to learn more about our pilot collaborations in Indonesia, India, Jordan, Nepal and South Africa, plus further updates from the global Water, Sanitation and Hygiene community.
