Summary of Substantive Changes between the 2014 and the 2020 editions of ASTM C564 “Rubber Gaskets for Cast Iron Soil Pipe and Fittings”

Presented to the IAPMO Standards Review Committee on July 13, 2020

General: The change to this standard might have an impact on currently listed products. The substantive change is:

• Corrected the performance requirement for the oil immersion test (see Section 9.8)

Section 1, Scope: Clarified the scope and added language for the standard development process as follows:

1.4 The following safety hazards caveat pertains only to the test methods section of this specification: This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.

1.5 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

Section 9.8, Oil Immersion: Corrected the performance requirement for the oil immersion test as follows:

The gasket material shall be tested for volume decrease increase due to oil absorption in accordance with Test Method D471.
